

## Scrum Master Training

Scrum is the most widely practiced Agile framework in use today. Agile-Scrum is one of the proven framework for completing complex projects.

Agile-Scrum process allows teams to deliver usable software periodically throughout the life of the project, absorbing change and new requirements as the project proceeds. Scrum is mostly applied for software development projects, but it can also be applied to any projects.

Scrum Master training course is an exclusive two-day training course, which allows professionals to explore more about the Agile Scrum framework in detail. It covers the Scrum principles and practices using a combination of discourse, interactive exercises, case studies and open discussions to create an effective interactive learning experience. It provides practical guidance for adopting scrum and continuously improving adoption of scrum framework in your organization.

Attendees will gain the knowledge and skill required to build high performing agile teams by becoming a servant leader.

Our aim is to make Scrum applicable to your day-to-day for managing projects, instead of simply teaching you the terminology necessary to clear the exam.
