

Development Services

Java Web Development

Lex Nimble Solutions have experience and expertise in providing best-in-class Java development services. Our clients belong to diverse industry verticals including Banking & Insurance, Law, Shipping and Logistics, E-commerce, ERP and more.

We develop complex and custom Java enterprise solutions using proven tools, technologies, architecture and methodologies. Our rich web applications development experience, flexible business model and finetuned processes result in a high quality, faster time-to-market web development within the budget and estimated timelines.

We use Java technologies for web services, component model and communications APIs to develop web applications for implementing enterprise class service-oriented architecture (SOA) and web applications.

Our JAVA web application developers are using tools like Ext JS, JSP, CSS, AJAX, HTML and framework technologies like Hibernate, spring, etc. With our systematic approach to design - ing and development, we guarantee an error-free and easy to use application in Java.

Some of our JAVA web development applications are:

- + SimpleLaw.
- + MyEsq.NG.
- + Q-Track.
- + Kizen.
- + ERP.
